Zurich Prevention of Natural Hazards

Protecting what you truly love

Zurich's Natural Hazard Radar

The Zurich Natural Hazard Radar: The analytical tool for your real estate property.

With all the many mountains, streams and lakes in Switzerland, it is often a matter of perspective whether a place seems just beautiful or perhaps also rather dangerous.

Landslides, floods, avalanches, rockfalls ... the Zurich Natural Hazard Radar can be used to perform a sound analysis of locations and properties, enabling you to best protect yourself and your real estate.

The Zurich Natural Hazard Radar was developed for Switzerland in collaboration with the engineers and geologists at GEOTEST AG, and draws upon the hazard and risk advisory maps of the Cantons and maps of the Federal Office for the Environment (FOEN).

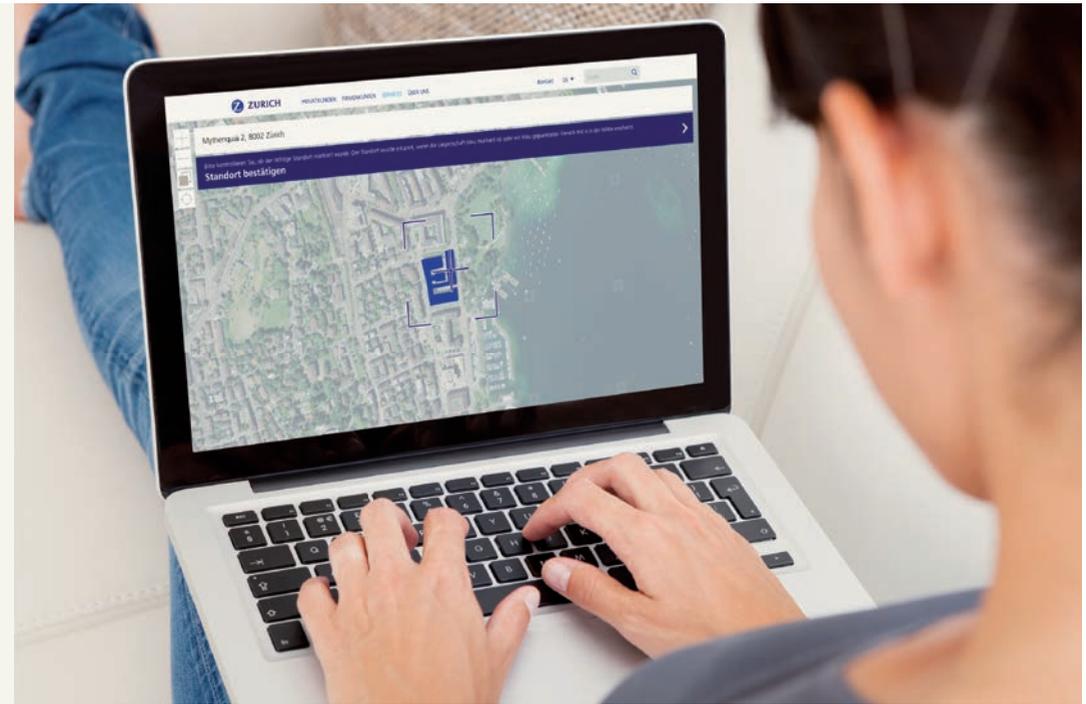

This analytical tool is part of Zurich's natural hazard prevention initiative, a comprehensive program developed in cooperation with various experts to protect the Swiss population against natural hazards.

Bernhard Kruppenacher,
Member of the Executive
Management of GEOTEST AG

New, free analysis tools from risk specialists like Zurich Insurance are extremely useful, allowing anyone to find out with just a few clicks whether and what natural hazards their residential property or business location may be exposed to. A simple but wise check one can perform to better understand what steps need to be taken.”
